

Post Breach Remediation Services

A cyber breach can devastate your core IT infrastructure, leaving your systems down, your IT team overwhelmed, and your business operations at a standstill.

The Challenge

A cyber breach is more than an incident—it is a crisis. Once contained, the real challenge begins: eliminating hidden threats, restoring operations securely, and rebuilding trust. Attackers leave backdoors, compromised credentials, and lingering vulnerabilities that can lead to repeat breaches. Meanwhile, regulatory pressures and business disruptions demand swift, decisive action.

Our Solution

CyberClan's Post-Breach Remediation Services are designed to facilitate a comprehensive recovery. We don't just eliminate threats; we restore your systems and strengthen your defenses to safeguard against future attacks. With our expert-led responses and proven strategies, we empower you to regain control and emerge even stronger than before.

We utilize a comprehensive four-step methodology in our Post-Breach Remediation Services, designed to deliver results and provide peace of mind:

Triage and Isolate: We expertly configure the network to establish a secure landing zone, employing reliable and time-tested recovery processes to ensure system restoration is swift and efficient.

Develop a Plan: We take a customized approach to every situation, working closely with your team to give you confidence in our methodologies and the best practices we implement for restoration activities.

Technical Resources: Deployment of experts across all IT areas, including Network Architecture and Segregation, Activity Directory Recovery, Exchange Recovery, Public Cloud, and MS Stack Applications such as ADFS, WSUS, and SCCM.

Rebuild and Restore: Act swiftly to restore vital IT functions and network infrastructure, ensuring your business operations resume quickly. By minimizing downtime, you protect your bottom line and reduce the financial impact of disruptions.

Key Features

Onsite or Remote Support: The Post Breach Remediation team can coordinate and execute remediation efforts both remotely and on-site, regardless of your geographical location, typically within 24 hours of incident reporting. This flexibility allows us to initiate recovery efforts as quickly as possible.

Network Configuration: We utilize proven processes to recover critical systems and services, including Active Directory, MS Exchange, and Point of Business applications such as payroll and ERP systems.

Team Collaboration: CyberClan is dedicated to helping your business resume operations while our Incident Response team manages the security breach. Our specialized teams work together to provide a seamless service experience.

Tailored Approach: We offer customized suggestions and implement recommendations to enhance your business security. This approach not only facilitates a swift resumption of operations but also helps reduce the risk of future breaches.

Benefits

- Decrease overall system downtime.
- Follow industry-standard best practice guidelines.
- Leverage our expert technical resources to support internal IT teams.
- Offer expert guidance based on our experience and access to CERT resources, along with recommendations to enhance your company's future security posture.
